

Jump to Rule Number or UID

In R80.10 you can jump directly to a rule number or a rule-UID.

With Ctrl-G you get the following:

Image not found or type unknown

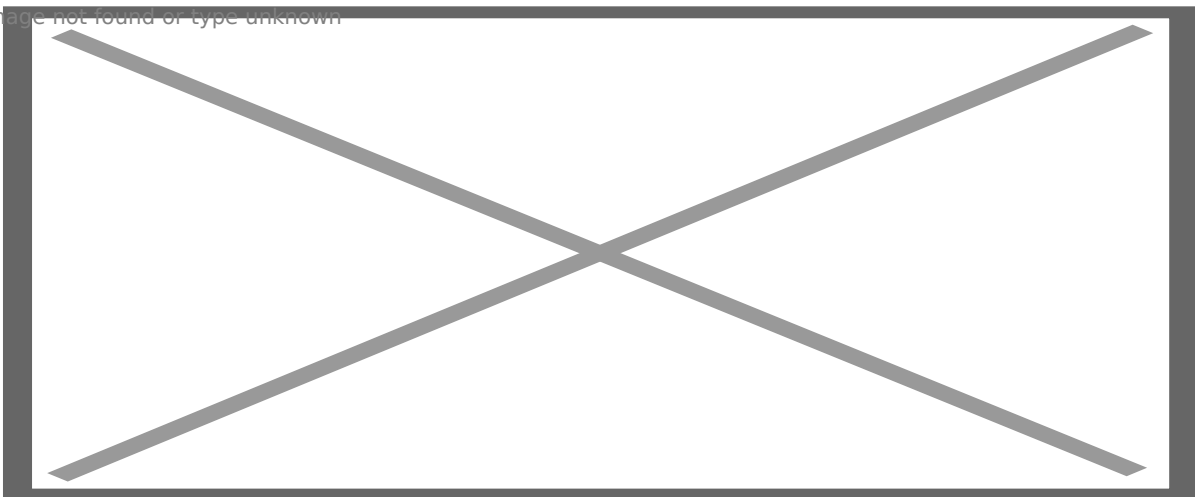

You can copy the UID from a rule:

Image not found or type unknown

Or search for an rule-UID:

Image not found or type unknown

Perfect to use in documentations, just use the rule-UID or sometimes I also use the
<FW_RuleName: FW_RuleName> Tag for documentation.
